SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 2 – Technical Presentation

Course Code:	DSA03	**Course Title:**	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	**Assessment:**	Assessment Tool 2 – Technical Presentation
Weightage:	30% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	T.Narasimha Reddy	**Reg. No.:**	192425190
Section / Batch:	AIML	**Date:**	22-10-26

Code of Conduct

I T.Narasimha Reddy -192425190 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: NarasimhaReddy

Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion
- GPS photo must submit.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	NLP Models, Language Processing Evolution	TP-01
Comparative Study of NLP Models and Algorithms	Model Analysis, Algorithm Comparison	TP-02
Regular Expressions for Real-World Text Processing	Pattern Matching, Information Extraction	TP-03
Designing Efficient Regular Expression Patterns for Information Extraction	Text Mining, Data Extraction Techniques	TP-04
Finite State Automata in Natural Language Processing	State Transitions, Language Recognition	TP-05
Building a Finite State Automaton for Token Recognition	Lexical Analysis, Token Validation	TP-06
Morphology and Word Formation in Natural Languages	Morpheme Analysis, Word Structure Processing	TP-07
Inflectional Morphology: Understanding Grammatical Variations	Grammatical Analysis, Word Normalization	TP-08
Derivational Morphology and Vocabulary Expansion	Word Generation, Semantic Transformation	TP-09
Comparative Analysis of Inflectional and Derivational Morphology	Morphological Classification, Language Analysis	TP-10

Finite-State Morphological Parsing Techniques	Morphological Parsing, Finite-State Processing	TP-11
Morphological Analysis for Indian Languages	Language-Specific Morphology, NLP Challenges	TP-12
Porter Stemmer: Design, Working Mechanism, and Applications	Stemming Algorithms, Text Preprocessing	TP-13
Stemming vs Morphological Parsing: A Comparative Study	Word Reduction, Morphological Processing	TP-14
Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	End-to-End Language Processing Pipeline	TP-15

Annexure A – Technical Presentation

Team No.	Technical Presentation Title	Description
1	Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.
2	Comparative Study of NLP Models and Algorithms	Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.
3	Regular Expressions for Real-World Text Processing	Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.
4	Designing Efficient Regular Expression Patterns for Information Extraction	Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.
5	Finite State Automata in Natural Language Processing	Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.
6	Building a Finite State Automaton for Token Recognition	Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.
7	Morphology and Word Formation in Natural Languages	Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.
8	Inflectional Morphology: Understanding Grammatical Variations	Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.
9	Derivational Morphology and Vocabulary Expansion	Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.
10	Comparative Analysis of Inflectional and Derivational Morphology	Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.
11	Finite-State Morphological Parsing Techniques	Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.
12	Morphological Analysis for Indian Languages	Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.
13	Porter Stemmer: Design, Working Mechanism, and Applications	Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.
14	Stemming vs Morphological Parsing: A Comparative Study	Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.
15	Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing.

Rubrics for Calculation

Technical Presentation					
Criteria	**Weightage**	**Level 4 – Exemplary**	**Level 3 – Proficient**	**Level 2 – Developing**	**Level 1 – Beginning**
Technical Content Accuracy	30	Highly accurate, in-depth, and insightful technical explanation	Technically correct content with adequate depth and clarity	Basic concepts presented with limited accuracy and depth	Content contains major technical errors; concepts poorly understood
Problem Identification	25	Problem rigorously analyzed using appropriate and advanced methods	Problem clearly defined with a logical engineering approach	Problem identified but analysis or methodology is weak	Problem statement unclear or incorrect; no logical approach
Use of Tools	20	Advanced tools, well-analyzed data, and highly effective visuals	Appropriate tools and data used effectively with clear visuals	Limited use of tools and basic data interpretation	Minimal or incorrect use of tools and data; poor visuals
Communication	15	Highly engaging, confident, and audience-focused delivery	Clear, organized, and professional communication	Understandable but lacks clarity, structure, or confidence	Poor organization, unclear speech, ineffective slides
Professionalism	10	Exemplary professionalism, leadership, and ethical awareness	Professional conduct with effective team collaboration	Basic professionalism; uneven team participation	Lacks professionalism; minimal contribution or ethical awareness

Team No. / Criteria Level	Technical Content Accuracy	Problem Identification	Use of Tools	Communication	Professionalism	Total %

NLP SEMINAR PRESENTATION

Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP

From hand-written rules to statistics, neural networks and LLMs

Presented by

T. Narasimha Reddy (192425190)

What is Natural Language Processing?

```
Apple opened an office in Chennai

on 22 Oct 2026, hiring 500 staff
```

Highlighted = entities found by NLP

The field that teaches computers to read, understand and generate human language.

Tokenize	split text into words
POS Tag	label nouns, verbs, etc.
NER	find names, places, dates
Parse	build grammar structure
Sentiment	detect opinion or mood
Translate	convert between languages

Real-World Applications

1

Machine Translation

Translate text between languages instantly, as in Google Translate

2

Chatbots & Assistants

Answer questions and hold conversations, as in Siri and ChatGPT

3

Sentiment Analysis

Detect opinions and emotions in reviews and social media posts

4

Search & Summaries

Find relevant documents and condense long text into key points

Milestones in NLP Evolution

1950s–1980s Rule-based

ELIZA, hand-written grammar rules

1990s Statistical

n-grams, HMM, probabilities

2013–2016 Neural

word2vec, RNN, LSTM

2017–today Transformers

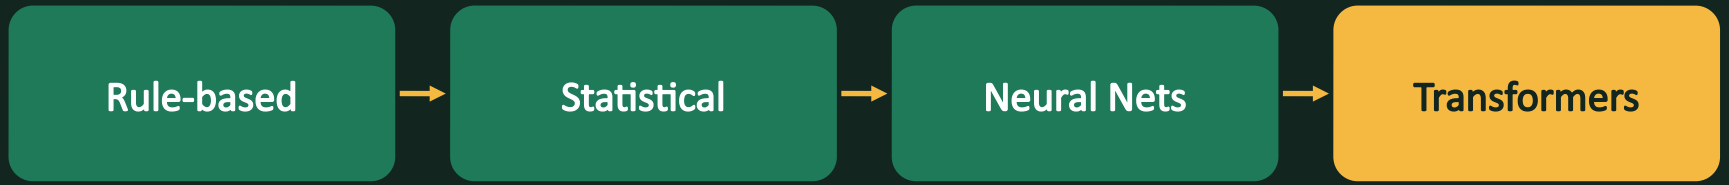

BERT, GPT, large language models

One task, two eras

```
# Rule-based
IF 'bad' in text:
  -> negative

# Modern model
model('not bad')
  -> positive 0.91
```

Evolution of NLP at a Glance

Rule-Based Era

- Hand-written rules and lexicons
- Precise but brittle
- Needs expert linguists

Modern NLP

- Learns patterns from huge data
- Understands context and meaning
- Needs heavy computing power

Advantages of Modern NLP

1

Learns from Data

Models improve from examples, with no hand-written rules

2

Understands Context

Handles ambiguity, tone and long sentences far better than rules

3

Multilingual Support

One model can work across many languages and tasks

4

Scales to Many Tasks

Translation, summaries and Q&A from one pretrained model

Limitations of Modern NLP

1

Needs Huge Data

Training needs massive datasets and costly computing power

2

Hard to Explain

Deep models act as black boxes, so decisions are hard to trace

3

Bias and Hallucination

Can repeat biases in data and state false facts confidently

4

Low-Resource Gaps

Languages with little data still get poor quality results

Conclusion

Key Takeaways

- NLP moved from hand-written rules to learning from data
- Each era fixed the limits of the one before it
- Modern NLP understands context but needs data and compute
- The future blends learned models with rules and human oversight

Thank you | T. Narasimha Reddy (192425190)

Real-World Applications
1
Machine Translation
Translate text between languages instantly, as in Google Translate
2
Chatbots & Assistants
Answer questions and hold conversations, as in Siri and ChatGPT
3
Sentiment Analysis
Detect opinions and emotions in reviews and social media posts
4
Search & Summaries
Find relevant documents and condense long text into key points
